SUMMARY

Full-stack Engineer with about a year of professional and freelance experience building production web applications in Python, TypeScript, React, and Next.js. Currently building admin tools, serverless APIs, and client-facing features for a pharma competitive-intelligence platform. I take a feature from API to UI to tests, check it against a running system, and use AI tooling to move faster without lowering quality.

SKILLS

Frontend: React, Next.js (App Router, Server Actions), TypeScript, Tailwind CSS, Redux Toolkit, TanStack Query
Backend: Python (FastAPI, AWS Lambda), Node.js/Express, Laravel/PHP, REST API design, JWT auth, RBAC
Data & Infrastructure: PostgreSQL, MongoDB, MySQL, Redis, Docker, AWS (Lambda, API Gateway, S3), Vercel, GitHub
Quality & AI: pytest, Jest, React Testing Library, Playwright, SonarCloud, Git, Jira, Claude Code, Anthropic API, Gemini API

EXPERIENCE

Junior Full-Stack Developer — Anervea (GRG Health), via KMC Solutions | *Remote* **Aug 2026 - present**

- Own full-stack tickets for two global pharmaceutical clients and the next-generation V2 platform, across Python serverless APIs and Next.js / React frontends. Every change ships with tests, passing CI, and senior review.
- Built an internal admin console (Next.js 16, React 19): role-based access, a client scope editor, alert-recipient management that replaced a hand-run seed script, and a conferences admin where no UI existed.
- Added admin-config REST endpoints on AWS Lambda (Python), restricted to platform-operator roles, passing pylint 10/10, 90%+ coverage, and SonarCloud security checks.
- Migrated client app screens from a legacy API to the V2 API, fixed production client issues, and built a mechanism-of-action news filter across API and UI. Verified changes on a local Docker stack with Playwright and Postman/Newman before review.

Freelance Full-Stack Developer | *Remote* **Jun 2025 - May 2026**

- **Legaforce** (Legacy Global Commercial Services, Riyadh): recruitment platform with applicant, employer and admin portals (React, TypeScript, Express, PostgreSQL) on Vercel and Render.
  - Built 100+ REST endpoints with JWT auth and RBAC covering applications, interviews, deployments, document uploads and notifications.
  - Built Gemini-powered CV summaries and candidate-to-job matching, used on applicants.
- **AcadFlow** (commissioned): Web portal (React, Laravel, MySQL, Zustand) that digitizes DepEd school forms, automates certificate generation,
- **AppliLoan** (commissioned): Loan management system (React, Laravel, MySQL) with descriptive analytics for cooperative administrators

Frontend Developer & QA Intern — Qtech Business Solution Inc. | *Hybrid* **Mar - Jun 2025**

- Built a support-ticketing system (React, Laravel, MySQL) with role-based dashboards for customers, agents and admins: tracking, assignment, comments and audit logs.
- Built the React frontend (Vite, React Hook Form + Yup) against Sanctum-authenticated Laravel APIs, and ran cross-browser QA.

PROJECTS

Renz-bot: Autonomous Jira-to-PR Agent (Python, Claude Code) **2026**

- Runs a headless Claude Code agent per Jira ticket in an isolated worktree, gates on tests and lint, and opens draft PRs for review. Never merges.

SyncIt — File Storage & Sharing Platform **2025**

- Built file upload, management and sharing with Appwrite auth and storage, with a storage-usage dashboard and debounced search.

BeeMo – IoT-Enabled Beehive Management System (Capstone Project) **2024**

- IoT system (PHP, JavaScript, Arduino, MySQL) monitoring hive temperature, humidity, and weight in real time, with analytics

EDUCATION

Bachelor of Science in Information Technology

- **Bachelor of Science in Information Technology** | CSTC, Sariaya, Quezon Philippines | Aug 2021 – Jun 2025
